FOR IMMEDIATE RELEASE

Computec unites IPC Trading System and Cisco's Unified Communications Manager Express

Tokyo, Japan – March 2009 – Computec Engineering, Ltd., one of Asia's leading IT service providers, initiates the integration of Cisco Unified Communications Manager Express (CUCME) with IPC's trading system.

This partnership expands opportunities for small to medium-sized financial clients and multinationals' branch offices seeking to establish or improve their communication between user desktop instruments (turrets, consoles, speakers and intercom modules), computers, data networks and telecommunications lines to work with their back office operations telephone systems at a moderate price.

In the past it has been common practice in the IT industry to offer large-business PBX systems for integration with the IPC trading system. This has often resulted in substantial per user costs for *small to medium* enterprises and branch offices. Now, firms with less than 250 users can choose Cisco Unified Communications Manager Express (CUCME). CUCME is a solution that offers most of the enterprise-grade features of CUCM, including English/Japanese display options, login, video conferencing, soft phone usage, wireless IP phone and voicemail via a router-based system. CUCME scales up to 240 IP phones and it can provide telephone conferencing services for up to 32 users.¹

John Lemkuil, President of Computec Engineering Ltd., states, "*We are really excited about the successful integration of the IPC Trading system with the Cisco VoIP telephone system, Cisco Unified Communications Manager Express (CUCME). We have already integrated the Tokyo branch office of a UK based Investment Management firm and we have seen many clients interested in this new partnership.*"

Computec Engineering, Ltd. is Japan's first and only company to integrate CUCME with the IPC Trading System, thus contributing to the enhancement of cost-effective telephony choice-making.²

IPC is a leading provider of indispensable financial trading communications solutions to the world's largest financial services firms and global enterprises. With 35 years of expertise and
